

Action for Climate Change for Bangladesh By Green Housing & Energy Ltd

Project Description

Low Cost Housing

The GHEL has recently restarted its Green Housing Project after several years of researching and experimenting how to build a house with "0" carbon emissions with following innovative approach to reduce the construction time period drastically. At the same time, GHEL Low Cost Housing has been designed to offer a resistant and decent housing to Bangladeshi households as many as possible with the support from the government of Bangladesh and other stakeholders. The durability of GHEL Low Cost Housing as well as the affordable prices and customized mode of payment corresponds perfectly to the needs of low and middle-income people living in rural areas. Thanks to innovative construction materials, our houses are cost-effective and reduce carbon emissions drastically and the main global warming pollutant. GHEL believes that housing solutions specifically designed for rural living conditions will have a significant impact on the economic situation and social status of families. In addition to providing comfortable living conditions, GHEL Low Cost Housing is designed to accommodate home grown businesses and foster the productivity of the household.
